

Coastal Unit E2 : Pandora

The Northern and Southern Cell Assessment Panels for the Clifton to Tangoio Coastal Hazards Strategy recommended a series of adaptation pathways to respond to coastal hazard risks along the Hawke’s Bay coast.

Solutions considered ranged from no or low intervention to soft engineering (e.g. beach renourishment), hard engineering (e.g. sea walls), and managed retreat.

The selected pathways are identified as being the preferred method for responding to coastal hazard risks for each individual coastal unit while providing a cohesive and logical response along the coast.

Pathway for coastal hazard management for Pandora

Storm Surge Barrier is the preferred pathway for managing coastal hazards at Pandora in the medium and long term.

PANDORA – PREFERRED PATHWAY		
Short term (0 – 20 years)	→	Medium term (20 – 50 years)
		→
		Long term (50 – 100 years)
Status Quo	→	Storm surge barrier
		→
		Storm surge barrier

Indicative inundation protection locations at Pandora.

Adaptation thresholds for Pandora

Adaptation thresholds describe a situation where performance measures are no longer being met or start to fail. These are the adaptation thresholds that have been developed for Pandora. They describe situations that the community wants to avoid by managing coastal hazard risks.

ADAPTATION THRESHOLD
<p>Coastal inundation causing the loss of one or more essential services affecting the majority of the community.</p> <p>How long: At least 48 hours</p> <p>How often: More often than once every 5 years.</p>
<p>Community-wide coastal inundation causing damage to multiple buildings/service.</p> <p>How long: Any duration</p> <p>How often: More often than once every 5 years.</p>
<p>Any serious injuries and/or fatalities that occur as a result of a coastal erosion or coastal inundation event.</p>
<p>Civil Defence emergency is declared in response to coastal inundation or coastal erosion.</p> <p>How often: More often than once every 10 years.</p>
<p>50% of an affected coastal community consider that a permanent loss of amenity has occurred as a result of coastal erosion or coastal inundation impacts</p>
<p>50% of the community report actual or perceived property purgatory effects i.e. actual or foreseeable damage to their properties from coastal erosion or coastal inundation and uncertainty about being able to recover their losses</p>
<p>50% of properties are unable to secure building insurance for losses from coastal hazards.</p>
<p>Access to and use of the beach, coastal reserves and/or recreational facilities is prevented as a result of coastal inundation.</p> <p>How long: At least 7 days</p> <p>How often: More often than once every 5 years.</p>
<p>Coastal inundation in Pandora affecting Thames Street and Severn Street causing loss of road access for the majority of the community.</p> <p>How long: At least 48 hours</p> <p>How often: More often than once every 5 years.</p>
